

My experiment with toilet paper and hand towel

My Notes about toilet paper experiment

I saw that in the toilet paper jar, it dissolved very fast.

I saw that in the hand towel paper jar, it is still the same.

My reflexion about the toilet paper experiment

It made me think that from now on I want to help the environment by being responsible of what I put in the toilet.

Hi Ms. Mary Helen and Mr. Ben,

I want to thank you for taking your time to explain about the toilet items to dispose in it. I made me more responsible and think about what I put in it. I will share it with my smaller brother. That is my way I can contribute with the environment.

Sincerely,

David Rivera
